Emergency Key Box

When an emergency arises is not the time to search for the key.

Every facility has restricted areas: utility closets, store rooms, computer rooms, stock rooms. When an emergency arises in these locations quick access is essential, you do not have time to search for the right key. Install an HPC Emergency Key Box at these locations. The key to these restricted areas is secured behind the plexiglas window. When the key is needed, break the window with the hammer attached to each box.
